KPIED's session on Patentability in Biotechnology at AISSMS College of Pharmacy, Pune.

Introducing Patentability in Biotech, a global perspective:

Oct 16, 2019: KPIED was invited to induct students of AISSMS College of Pharmacy in the area of Patentability in Biotechnology. A comprehensive session was conducted to elaborate on the subject matter.

Biotechnology has been in vogue for the past few decades and has only gained momentum. Post graduate students are engaged in research projects which make it crucial for them to understand the fundamentals of Patent law.

Provisions of law go hand in hand with the fundamental basics of any science and their economic implications. Ergo understanding the application of science sheds light on finer details legal provisions and its intrinsic effect on evaluation of the invention.

KPIED based their approach more on interaction, rather than a discourse format. Students were engaged using case studies to emulate legal proceedings. This resulted in deeper understanding of the subject matter amongst students.

“Patentability
in Biotech – a
global
perspective”.
